

I am not sure all the ramifications of the BPL system is being considered. If implemented, it will mean the destruction of radio communications as we know it. Personally, I have seen research which indicates that shortwave-listening, the only means of getting direct, non-filtered news from other countries, will be severely hampered. Thank you for making sure there is unbiased testimony from a wide variety of experts before considering BPL. I hope my shortwave radios will not become useless, and that military communications will not be disrupted by untested technology.
